

- 1) Download alpha243.zip package from the given link  
<https://sourceforge.net/projects/alpha243/files/latest/download>
- 2) Your git repository is in alpha243/Alpha\_243 directory
- 3) For the first use
  - a) Git pull origin master
  - b) Git branch -b **branchname** (give your branch name wisely )
  - c) Git checkout **branchname**
  - d) Open Eclipse using the batch file.
  - e)

f)

h)

rename your project properly.

- i) save the changes
- ii) git add .
- iii) git commit -m "reasonable text"
- iv) git checkout master
- v) git merge **branchname**
- vi) git push origin master

Once you have done this your code is online. Now onwards you will be working on your branch only. And whenever there is a significant amount of work done you will be merging this branch to master and pushing master, otherwise just push your branch only to git using following command

Git push origin **branchname**

and pulling from the server will be similar

Git pull origin **branchname**
